

Melting of Alpine Glaciers Under Recent Warming

T. Aoki and K. Kuchiki

Published: 11 January 2022 DOI: 10.1234/fixture.2022.001

Abstract

We present a fixture article used only to test the Atelier knowledge base CLI. It is not a real scientific publication.

Introduction

Albedo decline drives melt. Results show significant increase in melt rate during the study period, with root-mean-square error below 5 percent.

Conclusion

We conclude that fixture PDFs are sufficient for CLI parity testing.
